October 19, 2015 (v.2.0.0)

General

- New iQniter Smart Sensor belt **Bluetooth** ,
    - Requires new iQniter Team Receiver.
    - Bluetooth Smart product - for use with iQniter Cardio training, Bluetooth devices and Smartphone cardio App's.
    - Compatible with Suunto connected family (ex. Ambit 3 watches and Movescount App, iPhone, Android).
    - Supports training outside the club
        - Can store your moves and upload later.
        - Can pick up data while in water, ex swimming.
    - **We recommend** Use the smart sensor belt with new club installations. If you want to support iQniter Smart Sensor Belts (BLE) in an installation with Suunto Team Pod, you need to install an extra iQniter Team receiver.
- New iQniter Team Receiver
    - Supports both iQniter/Suunto Dual Belts (ANT) and iQniter Smart Sensor belts (requires BasiQ+ or BiQing license subscription).
    - Removes the present limitation related to maximum number of participants when using more iQniter Team Receivers in the club and having BasiQ+ or BiQing license subscription.
    - Can operate together with the Team Pod
    - **We recommend** Use the iQniter Team Receiver with new club installations or if you want to support iQniter Smart Sensor belts (BLE) in an installation with Suunto Team Pod, install a supplying iQniter Team receiver.

Release Notes

- BasiQ+ license subscription now gives access to:
  - Smart Sensors (Bluetooth).
  - Advertising Video.
- Easier installation and less support requirements.
  - Fewer requirements to open ports in the club's network firewall.
  - Easier installation and recovery. All data in the cloud. No need to install local SQL Express database. AdmiQ requires connection to iQniter cloud and will not operate offline.
- All data including training database is stored in cloud. Upload to Movescount and sending of emails now handled from iQniter cloud.
- Movescount App for iPhone or Android.
- Low battery on belt indication - Heart rate belt/smart sensor low battery level is now shown on the participant's tile on the Group Screen and added to the individual training report.
- The participant's Recovery Time after a training session is added to the Individual Training Report.
- Various improvements and bug-fixes.

Cardio Training

- Prepared for Watts, RPM and %FTP supported for Keiser m3i bikes (Keiser Multi-Bike Receiver and BiQing license required). Final release later in 2015.
- Low battery level of the participant's heart rate belt/smart sensor displayed on the Group Screen.

AdmiQ

- Administrator login on club and chain level (selected tabs in AdmiQ).
- Cardio Training settings can now be individually set on each computer and can be managed from AdmiQ on chain, club, and computer level.
  - Facilitates editing of individual Cardio Training settings from AdmiQ. Setting lock feature is available as an option to prevent unintended change of setting values in Cardio Training.
  - The Local (Customized) Exertion Scale and Texts setup have been moved to the Cardio Training Settings tab.
  - The 'Save All Settings' button in Cardio Training can now be disabled from AdmiQ.
- Training Data (previously named Stored Sessions) is downloads from the cloud to AdmiQ for viewing.
- Added option for resending Session Summary reports to specified emails.
- Added option for adding the participant's FTP (Functional Threshold Power) to their member profile, which is used to display the participant's FTP percentage on the Group Screen. (for use with Watts and RPM training later this year)
- Added option for entering iQniter Smart Sensors.
- Internet connection is **required** for operation.
